

Discover the world of modern
and agile working.

#MDRN.WORK

A new era of working begins. See how companies and employees can benefit from the use of deHOSTED solutions and the digitization of the work environment.

Story.

With digitization we are witnessing the greatest change in the world of work since the industrial revolution. See how our vision of a modern working world can be a reality for you. As the leading cloud service provider for „Modern Work“ in Europe we are developing on the basis of Microsoft technology, cloud-based, high-performance and secure services for digital company communication and collaboration.

HXA Systems.

With the increasing demand for more mobility, technology, productivity and collaboration in many organizations, HXA systems innovative solutions are designed to support mobility, improve organization, enhance privacy within your workplace and help your business run smarter. All supported with fascinating apps available on different platforms turning relatively time consuming tasks into a few button presses, all while looking sleek.

Modern IoT-cloud technologies of HXA Systems allows better collaboration tools and improve operations at your organization. The aim is to enhance Productivity using technology, saving time of employees and helping them to get tasks done more quickly.

HXA MDRN.WORK - Agile Office.

Dynamic, yet structured – HXA Systems provide the opportunity to set up a complete office landscape from zero to immediately comprising Private and Open Space advantages or simply to improve an already existing office environment or to complement it by some new structures.

HXA MDRN.WORK is not only designed for an application in office environments but may as well be used as a Mobile Office at trade shows or in public areas or in private as home office.

The DNA of HXA Cube for a completely new office experience

#MDRN.WORK REVOLUTION.

A new hybrid concept combining the advantages of private and open workplace, integrating the latest IoT-cloud technologies ensuring a smart, mobile and noise isolated workspace that stimulates innovation.

HXA Desks.

HXA Desk is more than just legs holding a piece of wood, it is time to completely redesign the office desks to something really smart, modern and suitable for an agile work environment.

Employees do not have to stick to the same office desk everyday anymore. HXA Desk is a smart office desk allows an employee to adjust the desk to his preferred height whether he wants to sit or to stand up while doing the work. The superior design of HXA desk with the surrounded little lights interacts with the Cloud (e.g skype for business) indicating if the employee is busy, available or even in a call avoiding interruptions and increasing the productivity. HXA Desk is made of high quality materials makes it extremely solid and comfortable.

HXA Cube.

A mobile and noise isolated room space that combines the latest IoT-cloud technologies with an innovative design. A modern and revolutionary solution that Introduces privacy to open workspace and resolves the problem of lack of space. The integrated IoT technologies allows an ultimate control over the room environment achieving the highest levels of comfort for occupants, saving time, energy and enhancing overall productivity.

A smart meeting room with simple and modern meeting processes through integrated calendar system. It can be quickly and easily integrated to your current workplace as a private office, a meeting room or as a relaxing space. A Perfect solution for those building a new workplace or undertaking a remodel.

HXA cube can be constructed and deconstructed in a short time, without disturbing the existing building or even introducing inconvenience to the occupants therefore stands as a unique solution for the best utilization of your workspace while at the same time, minimizing costs and stimulating innovation.

HXA SYSTEMS PRIVATE, FLEXIBLE, CREATIVE

Smarter Working and Future Workplace are just some of the currently much used buzz words which describe a workplace revolution by using new technologies, in particular Cloud Services and IoT. These workplace concepts, which are often promoted as being innovative, have actually existed in their essence for more than 60 years and have just been slightly modified. Already back in the 1960ies, the first productivity enhancing concepts were developed by Quickborner Team in Hamburg and implemented as what is nowadays referred to as Open Space Offices.

Latest studies concerning Open Space Offices prove that they can contribute to support productivity between staff by a faster exchange and at the same time optimize workspace which, by consequence, leads to a decrease in costs. However, the loss of the employee's private sphere as well as of the own creativity is still an unpleasant yet unavoidable side-effect. This was recently given evidence of in a study published and particularly initiated by the University of Sidney (Workspace satisfaction: The privacy-communication trade-off in open-plan offices). It shows that approximately 50% of all the staff suffers from working in an open environment, which has a clearly negative effect on the employees' state of health.

HXA - A Forward Thinkers' Revolution .

Being one of the leading Cloud Service providers for modern working, the NetTask team used their know-how to develop a convenient workspace concept which is suited to keep up with the age of Cloud and IoT. To achieve this, it was necessary to join the input delivered by the best "brains" from different - in order to start a new revolution of forward thinkers.

It resulted in HXA Systems, a workspace concept tailored to the use of state-of-the art technologies, which does not only unify the person, its environment and technology, but whose entire design adapts the uniqueness of nature. The natural shape of the hexagon is a basic structure that is already featured on the molecular level.

The unique modularity and mobility as well as the integration of advanced technologies basing on a hybrid IoT Cloud platform makes room for creativity, efficiency and flexibility.

In my opinion, HXA Cube is the most innovative thing that can happen to the Open Space Office. Using the IoT technology, confidential conferences are so easy.

- Thomas Birkner, Sennheiser -

HXA Cube – Basis for private and collaborative working.

Some enterprises have just evolutionarily started to reduce negative influences of Open Space Offices by a targeted use of recreation areas and modern canteens. However, productivity could only be increased marginally by these measures.

Features, such as presence information connected with the integrated room calendar which displays the utilization status of the HXA Cube, allow the employees a use adapted to the particular work situation.

The integrated room calendar system shows all current and planned appointments on displays at the HXA Cube. They can be planned spontaneously on the HXA Cube or at any time via calendar invitation by smartphone, tablet or in Outlook as well. Moreover, the HXA Cube provides further features of a Smart Office.

The Room Environment Control System turns each office into a smart one by making light, air condition or even the projector controllable by app. Essential environment parameters cannot only be operated by a tap of the finger but even by voice command.

HXA Cube Features, Dimensions and Prerequisites

HXA Cube easy & fast integration.

Combining the newest IoT - Technologies with our modern design gives us the opportunity to offer a wide range of features for our customers. The modular design of the HXA Cube let you customize the features according to your needs.

We have build the HXA Cube in a way which requires a minimum prerequisites to be integrated in your work environment.

Prerequisite for the HXA Cube

- 7m² room space
- 220 Volt power cable
- Internet connect (RJ45 Ethernet Cable or wireless connection)
- Exchange Room Calendar Mail-box

HXA Cube is an individual space that realizes the private atmosphere for meeting, conferences or private working in all environments.

- Noise and acoustic reduction
- IoT Ready
- fully automated

The Separators are specially developed to absorb the direct noise.

HXA Desk is the very first working desk that integrates the newest IoT Technologies beside the ability to be connected to Skype for Business.

The presence status light helps to reduce disturbance and increases the productivity of the employees.

HXA Room Calendar Display is a simple and fast booking system that organizes the usage of the rooms in the working environment.

- Microsoft Exchange ready
- Microsoft Office 365 ready

The HXA Desk smart screen is the main brain which controls all the integrated technologies according to each employee profile.

HXA Hybrid Working Environment

It is the result of 8 years of research and development. The goal behind was to merge two worlds together (open workspace & traditional workspaces) with all of their advantages in one modern & technology integrated workplace.

- increase productivity
- reduce costs
- healthier working life
- newest technologies

deHOSTED Data Security.

The security of company and customer data is now more important than ever. We ensure the highest data protection and data security through infrastructures operated in Germany and therefore protect you from possible data access by foreign organizations and authorities.
